Mobility is happening

As the modern workforce mobility increases, up to 29% of corporate data will flow between mobile devices and the cloud by 2018.2 You don’t want your company’s data to be at risk of a breach.

Here are a few security risks that can threaten your organization:

- Device attacks, such as malicious codes in online ads, email attachments, or social media posts, can be used to gain access to device data or control the device’s functions. These can be used to steal sensitive information through web browsers, email attachments, or ad clicks. Attacks on devices, such as malvertising, can come through web browsers, email attachments, or ad clicks.
- Employee behavior at the firmware layer.
- System glitches
- Human error
- Malicious criminal attacks
- Organizational misalignment
- Physical access
- Reports and policies
- Security compliance

Mobility introduces security risks

Mobile phones, laptops, and tablets are attractive to hackers as they contain sensitive company information, and mobility gives hackers additional opportunities to gain access to corporate data.

Here are a few security risks that can threaten your organization:

- Malicious criminal attacks
- Organizational misalignment
- Physical access
- Reports and policies
- Security compliance

Here are a few security risks that can threaten your organization:

- Malicious criminal attacks
- Organizational misalignment
- Physical access
- Reports and policies
- Security compliance

$3.6 million. That figure is on the rise: Since 2015 to 2016.� An attack by a malicious insider or criminal is 22% costlier than spreading malware.� Malvertising (using malicious codes in online ads to spread malware) increased by 133% from 2015 to 2016.� Worse yet, reports show that malvertising is at an all-time high.
